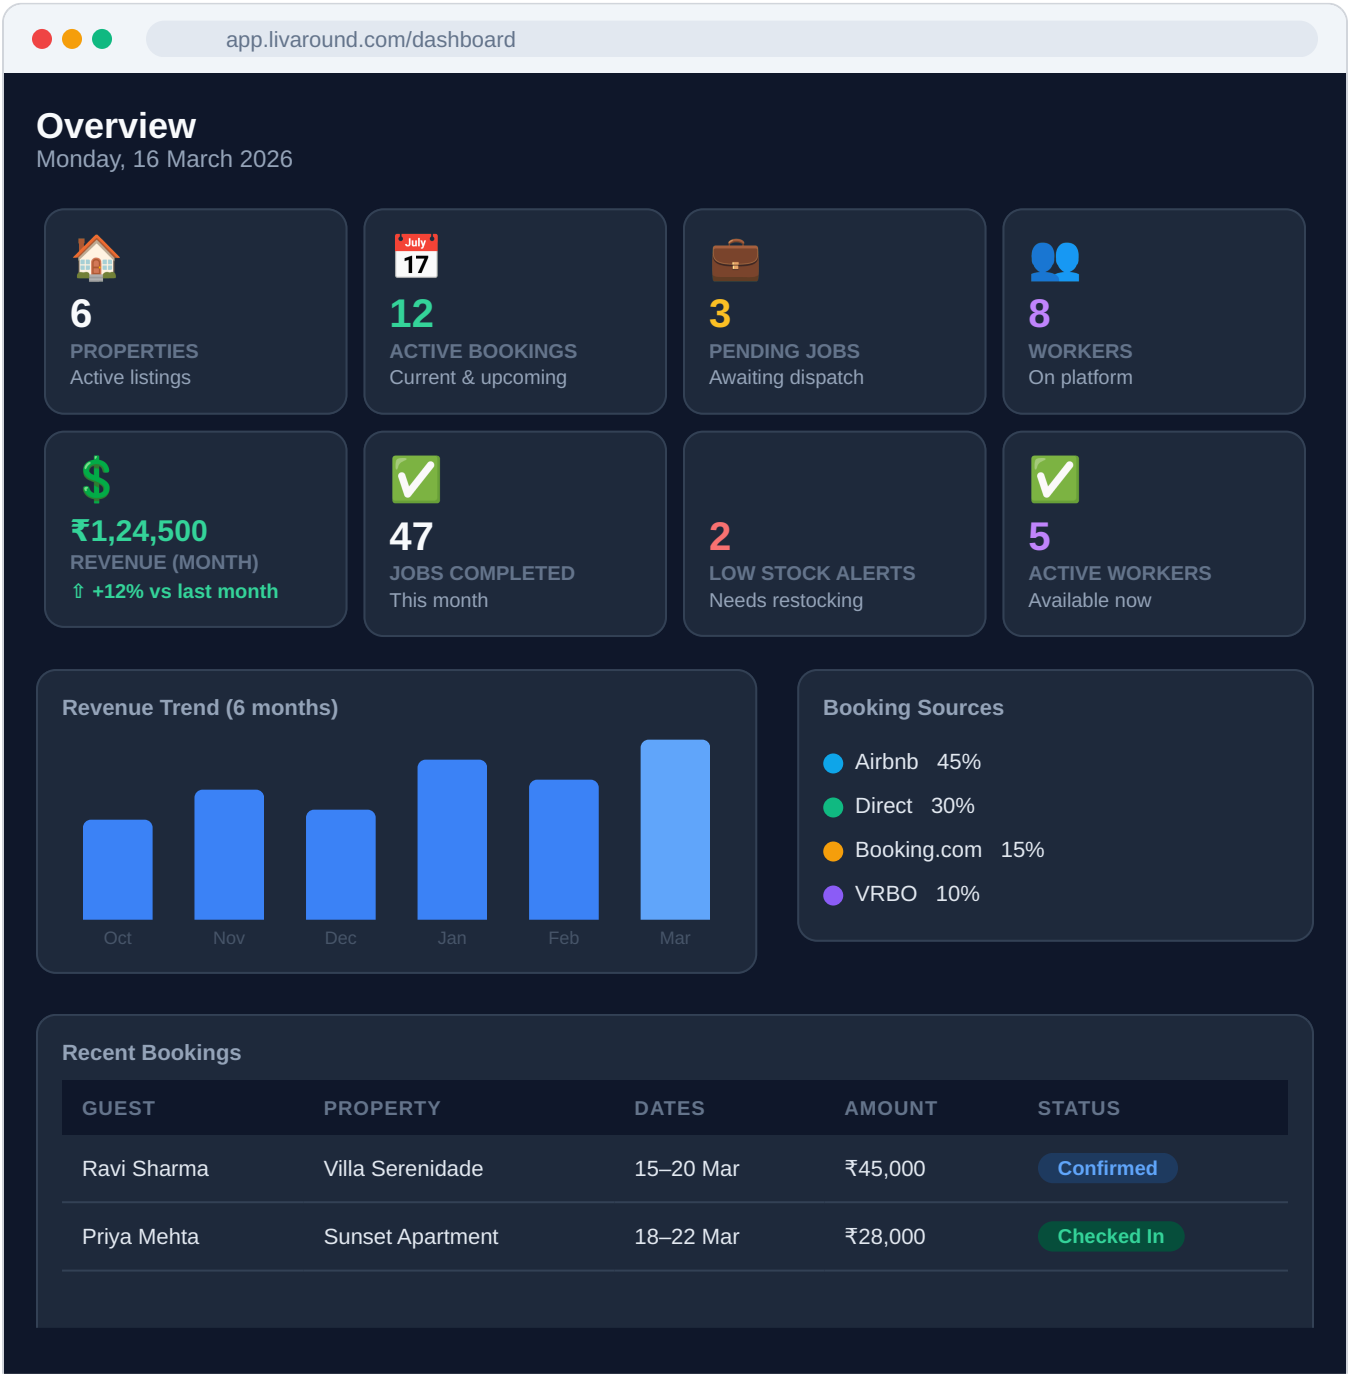
01 Dashboard Overview

The Dashboard is the first screen you see after logging in. It gives you a real-time overview of your entire operation — properties, bookings, pending jobs, worker activity, revenue, and stock alerts — all without navigating away.

1. Log in at **app.livaround.com** with your host credentials.
2. Review the **8 KPI cards** at the top for an instant health check.
3. Check the **Revenue Trend** chart to spot month-on-month growth.
4. Act on **Low Stock Alerts** and **Pending Jobs** before they become problems.
5. Click any row in the Recent Bookings or Upcoming Jobs tables to jump straight to that record.



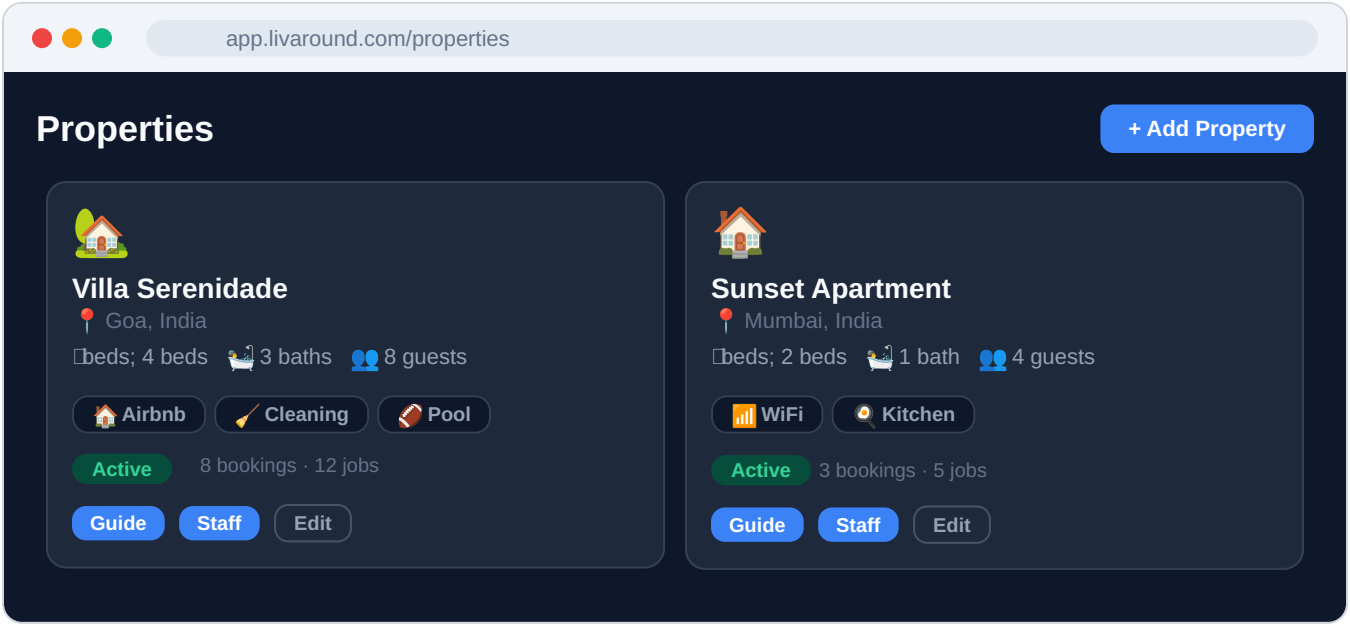
John Smith	Villa Serenidade	25–30 Mar	₹52,000	Confirmed

> 💡 **Tip**
>
> The Dashboard auto-loads fresh data each time you open it. Bookmark it as your daily starting point. Click any KPI card to jump directly to that section.

02 🏠 Properties

Properties are the foundation of LivAround. Every booking, job, worker assignment, inventory item and revenue report is linked to a property. Set them up once with full details — including WiFi, door codes and house rules — and the platform uses that information everywhere.

1. Go to **Properties** in the sidebar and click **+ Add Property**.
2. Fill in name, type, address, bedrooms, bathrooms and amenities.
3. Enter **Guest Experience** details: WiFi credentials, check-in instructions, house rules.
4. Optionally link or create a **Property Owner** with an involvement level.
5. Click **Save Property**. Use the **Guide** and **Staff** quick-links on the card to continue setup.

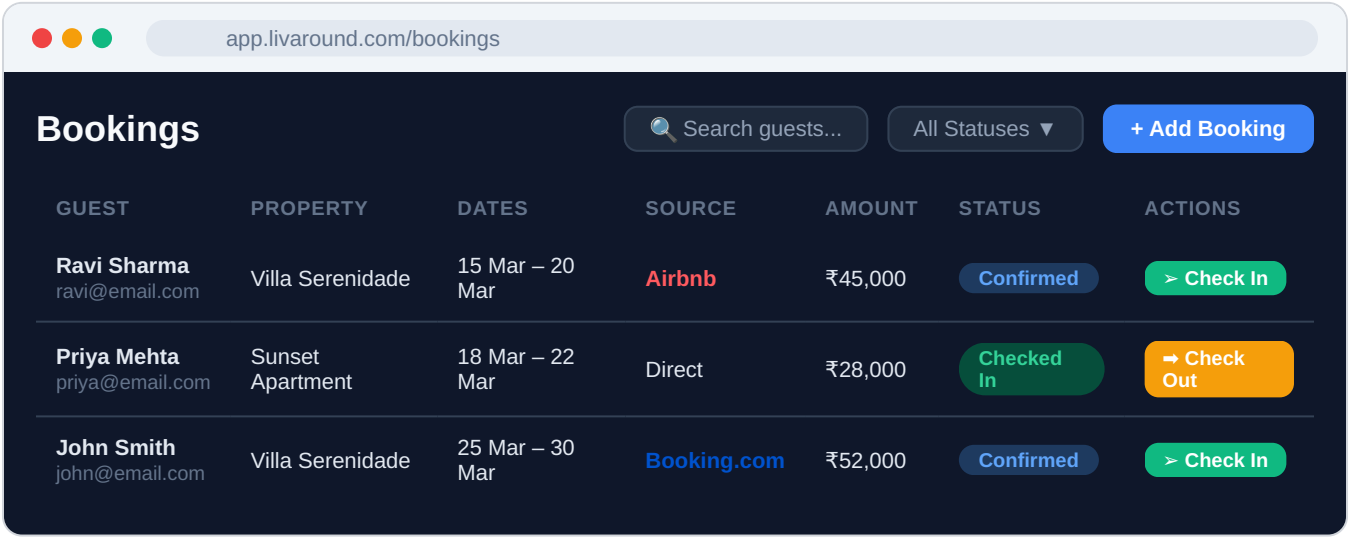


> 💡 **Tip**
>
> Enter WiFi credentials and the door lock code in the property settings. These are automatically revealed to workers only *after* they accept a job — keeping access details secure.

03 📅 Bookings

The Bookings section tracks every guest stay across all your properties. Log bookings from Airbnb, Booking.com, direct and other channels in one place. Each booking generates a unique guest stay link with WiFi details, house rules and check-in instructions.

1. Go to **Bookings** and click **+ Add Booking**.
2. Select the property and booking source (Airbnb, Direct, Booking.com, VRBO, LivAround).
3. Enter guest name, email, phone and the check-in / check-out dates.
4. Set the total amount, currency and optionally a lock code.
5. When the guest arrives, click the **Check In** icon. On departure, click **Check Out**.

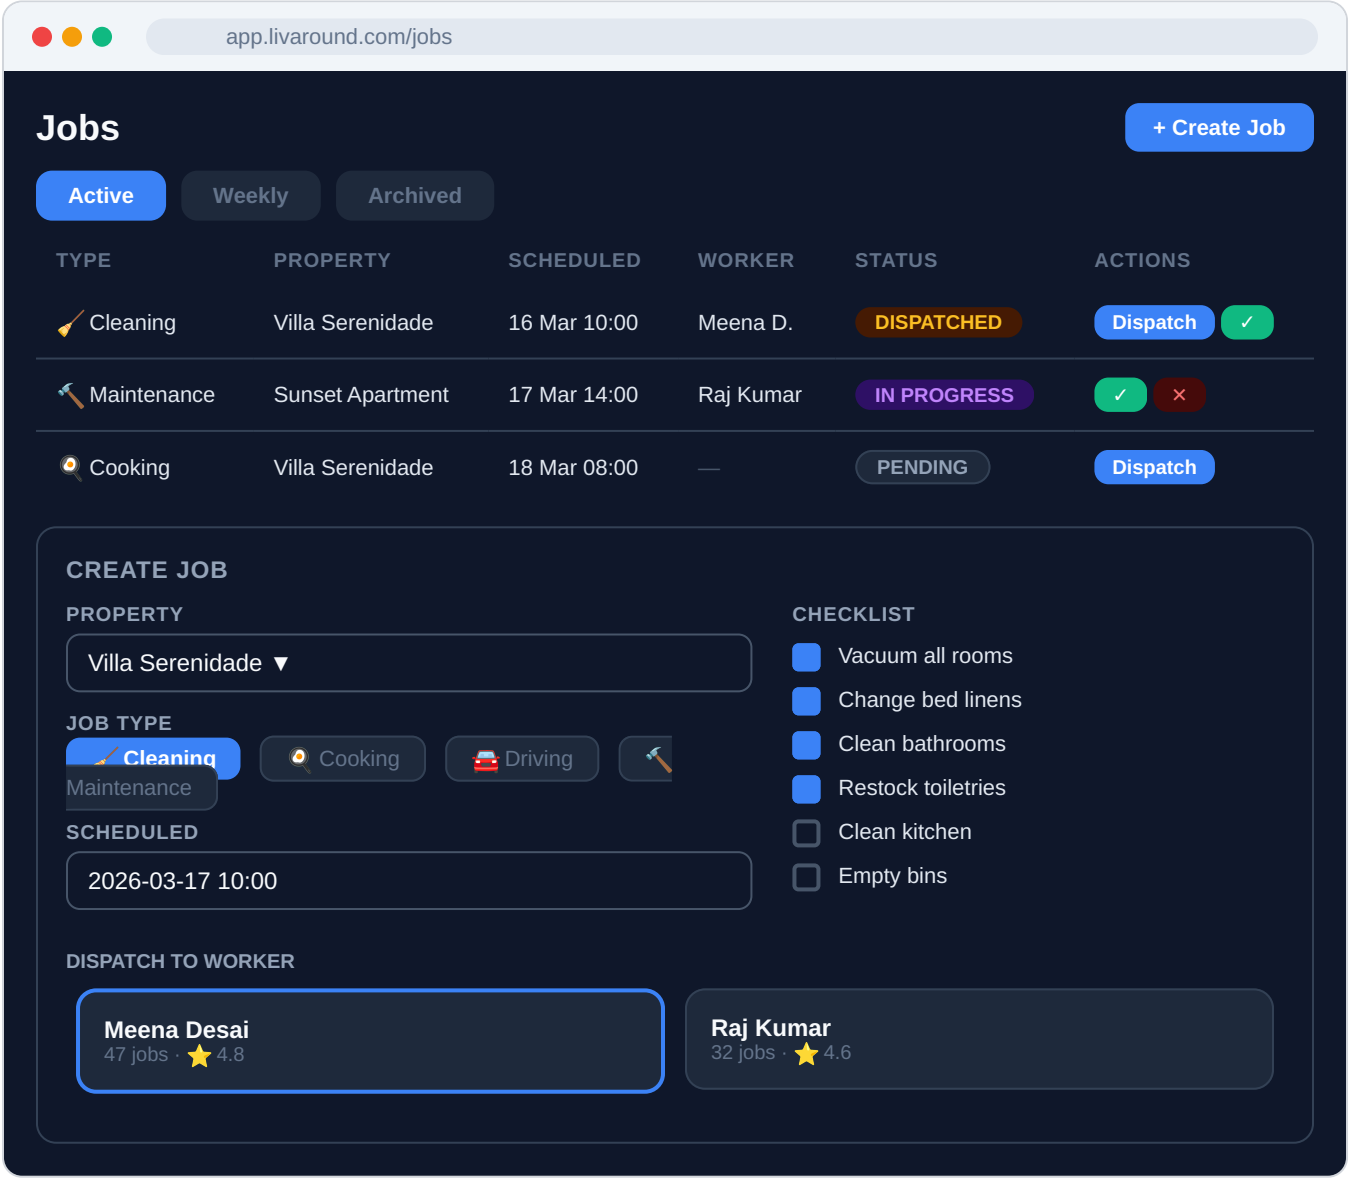


> 💡 **Tip**
>
> When you create a booking, LivAround generates a unique guest stay link. Send this to the guest in your welcome message — it shows WiFi, check-in instructions and house rules without them needing an account.

04 Jobs & Dispatch

Jobs are tasks you assign to workers — cleaning, cooking, driving or maintenance. Create a job, customise its checklist, and dispatch it to an available worker. Workers receive a push notification on the mobile app and can accept, start and complete jobs in real time.

1. Go to **Jobs** and click **+ Create Job**.
2. Select a property, job type and scheduled date/time. Optionally link to a booking.
3. Review and customise the default **checklist** for that job type.
4. Click **Dispatch** — select an available worker with the matching skill.
5. Monitor status updates (Dispatched → Accepted → In Progress → Completed) in real time.
6. Archive completed jobs to keep your active list clean.

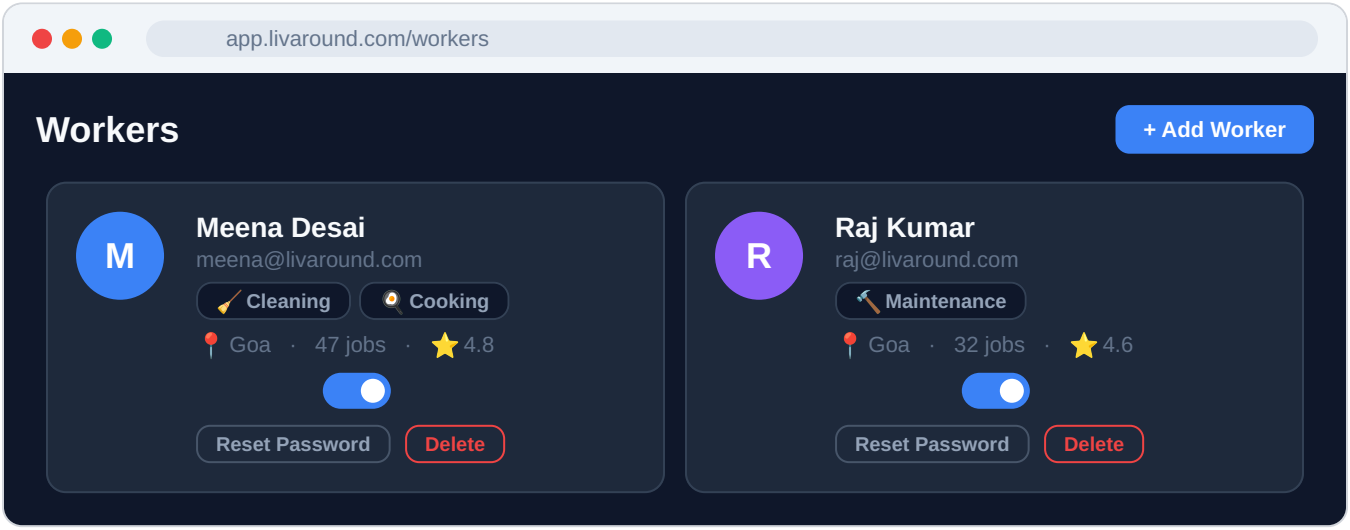


> 💡 **Tip**
>
> Use the
>
> **Weekly view**
>
> to see all jobs plotted on a Mon–Sun grid. Today is highlighted. This is the fastest way to spot scheduling gaps or double-bookings.

05 Workers

Workers are the people who carry out your jobs — cleaners, cooks, drivers and maintenance staff. Add them to the platform, assign them to properties, and manage their availability and skills from one screen. Workers log in via the mobile app or web portal.

1. Go to **Workers** and click **+ Add Worker**.
2. Enter their name, email, phone, location and select at least one skill.
3. Click **Create Worker** — a temporary password is shown. Share it with the worker.
4. Use the **availability toggle** to control whether they receive new dispatch notifications.
5. Click the property assign button to link them to one or more properties and set their role (Cleaner, Caretaker, Supervisor).

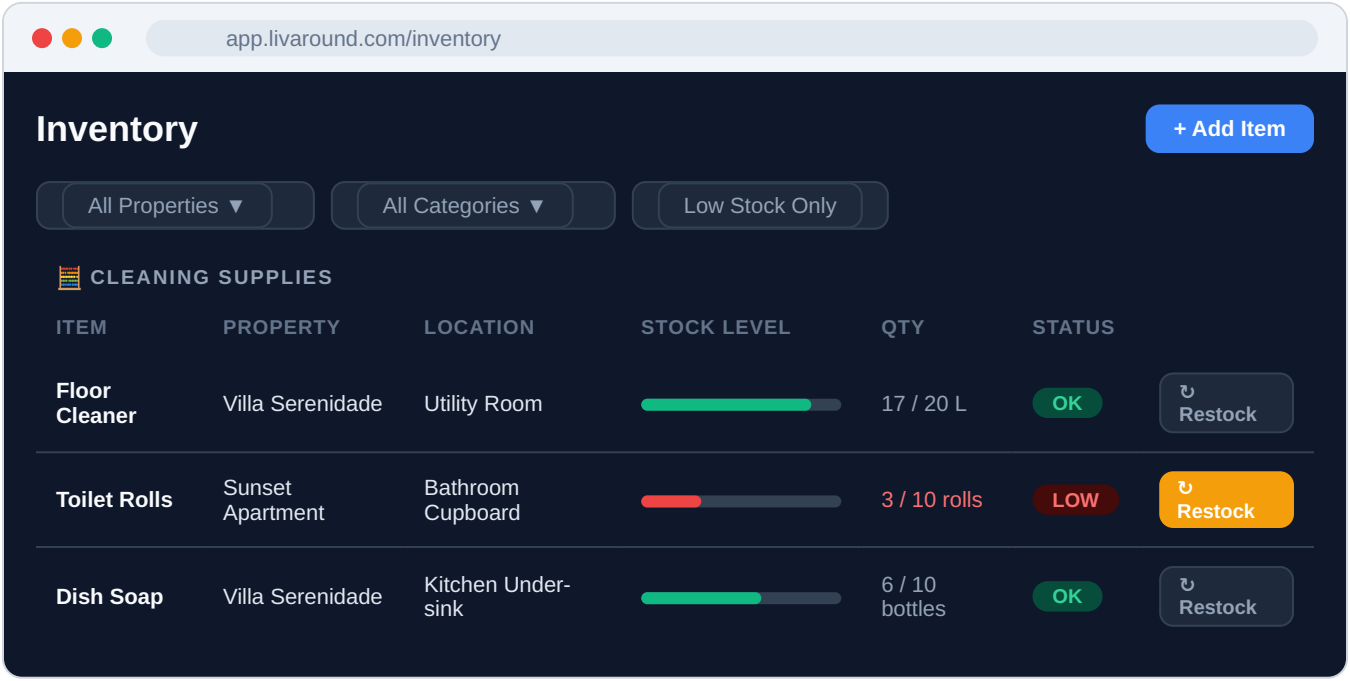


> 💡 **Tip**
>
> Only workers with the matching skill *and* availability set to On appear in the dispatch panel. If a worker is not showing up for dispatch, check both their skill list and availability toggle.

06 📦 Inventory

Track consumable stock across all your properties — cleaning supplies, toiletries, kitchen items and linens. Set minimum thresholds and LivAround will alert you (and show on the Dashboard) when stock falls below the safe level, so you never run out between guest stays.

1. Go to **Inventory** and click **+ Add Item**.
2. Select the property, category, item name, current stock, minimum threshold and unit.
3. Optionally upload photos and enter the storage location.
4. When stock is replenished, click the **Restock** icon and enter the new quantity.
5. Use the **Low Stock Only** toggle to filter and action alerts quickly.

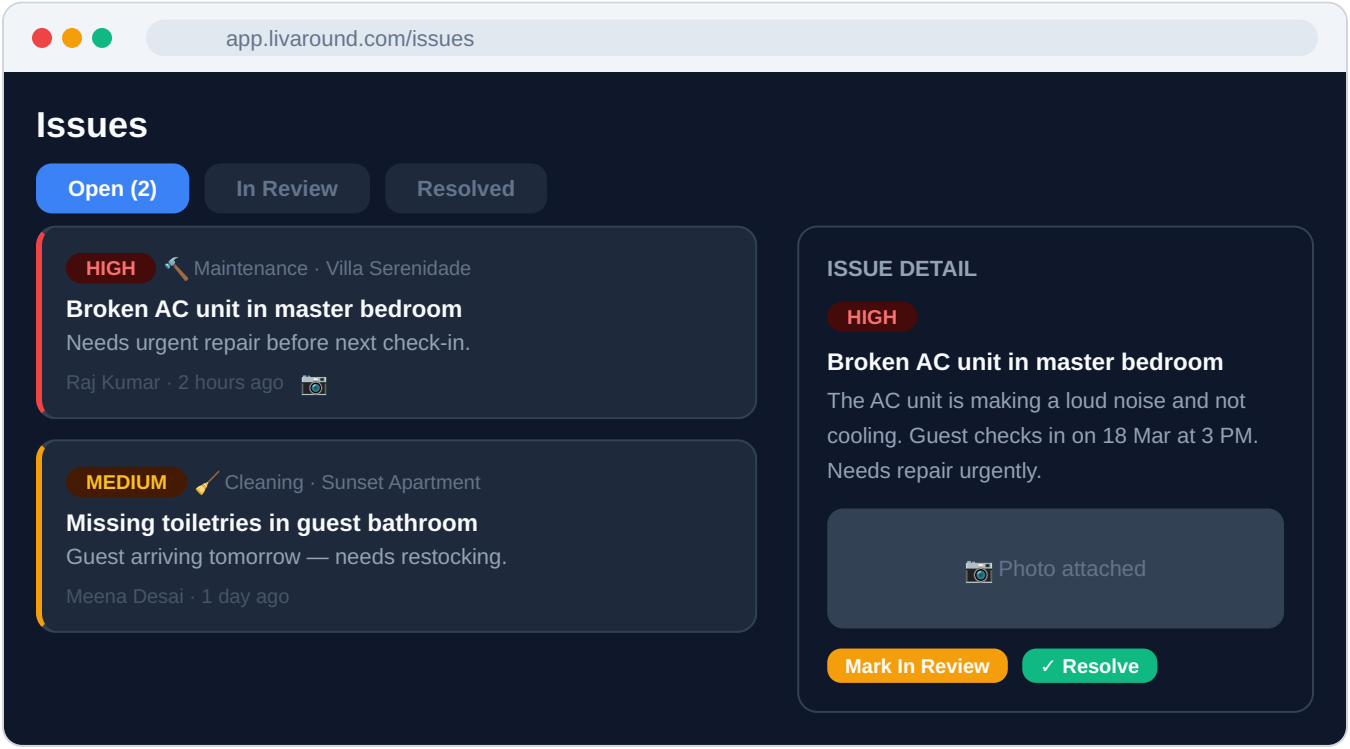


> 💡 **Tip**
>
> Set minimum thresholds slightly above your true minimum (e.g. if you need 4 rolls, set the threshold to 6). This gives you a buffer before the item actually runs out.

07 ⚠ Issues

Issues are problems reported by workers during or after a job — a broken appliance, missing supplies, damage, or a safety concern. Workers submit them directly from the mobile app with photos and a severity level. You review and resolve them from this screen.

1. Go to **Issues** to see all worker-reported problems.
2. Filter by **status** (Open, In Review, Resolved) or **severity** (Low, Medium, High).
3. Click any issue card to open the detail panel — read the full description and view attached photos or video.
4. Click **Mark In Review** to acknowledge it, or **Resolve** once actioned.
5. For high-severity issues, consider creating a **Maintenance Request** to assign a tradesperson.

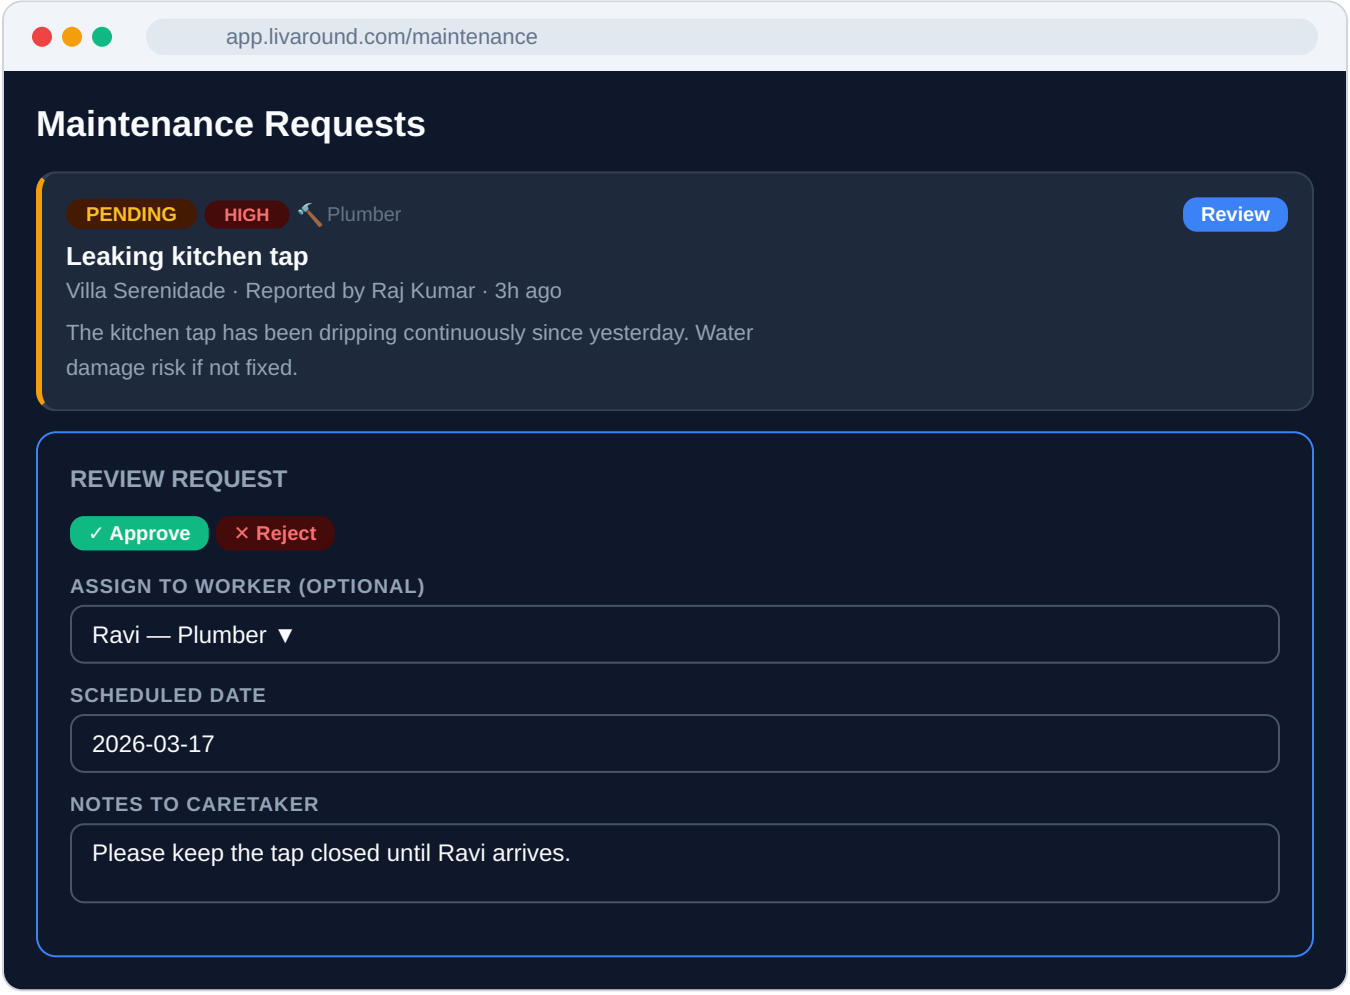


> 💡 **Tip**
>
> High-severity issues reported less than 24 hours before a check-in should be your top priority. After resolving, create a linked Maintenance Request to track the fix and assign a tradesperson.

08 🔨 Maintenance Requests

Maintenance Requests are raised by on-site caretakers or cleaners when something needs repair. Each request includes a description, priority level, trade role required and an optional photo. You review and approve (or reject) before a tradesperson is assigned.

1. On-site staff submits a request via the worker portal — you receive a notification.
2. Go to **Maintenance** and find the new **Pending** request.
3. Click **Review** — read the description, trade role and priority.
4. Click **Approve**: optionally assign a worker, set a scheduled date and add notes.
5. Or click **Reject** with a reason note sent back to the caretaker.
6. Track the request through to **Completed** status.



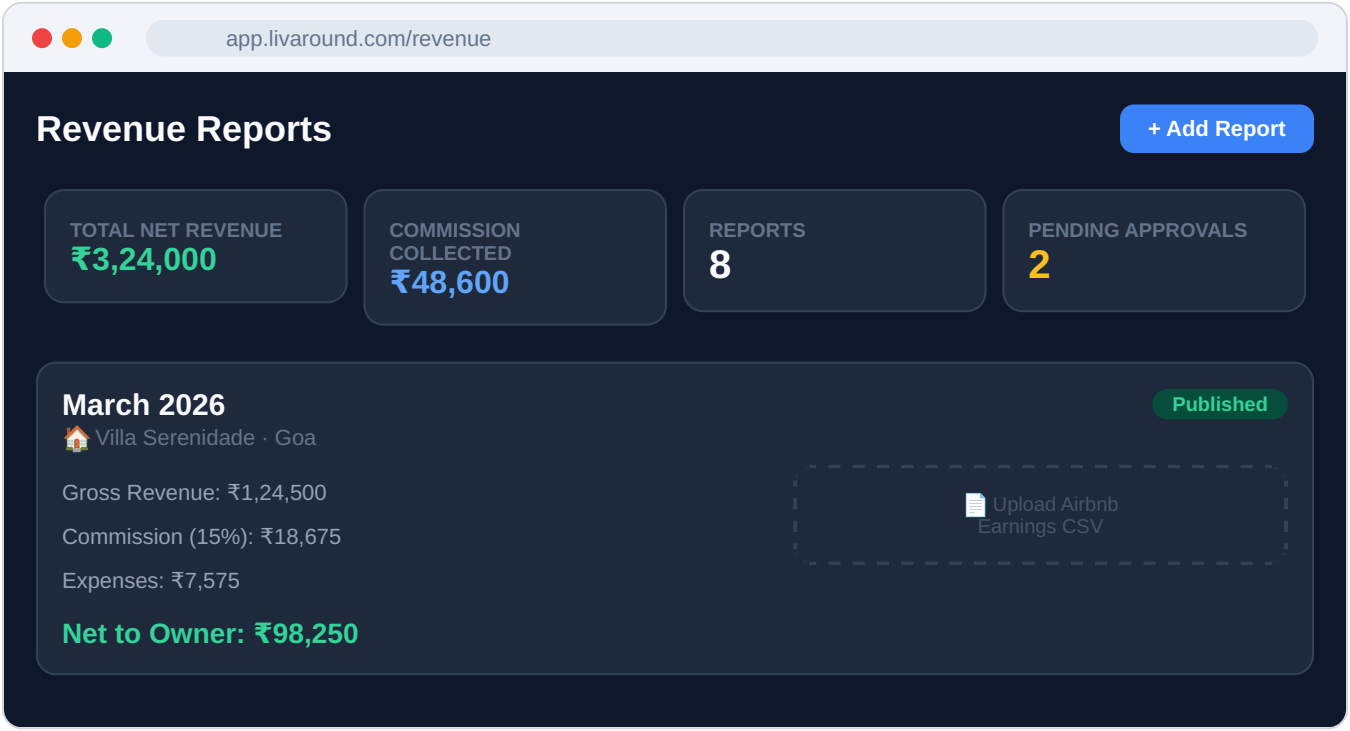
> 💡 **Tip**
>
> In Property → Staff settings you can enable **Auto-assign**

> for specific trade roles (e.g. Plumber, Electrician). Requests for those trades skip your approval and go straight to the assigned tradesperson — saving time for routine fixes.

09 Revenue Reports

Revenue Reports give owners a transparent breakdown of monthly earnings, platform fees, your commission, and expenses — with a clear Net to Owner figure. Import directly from Airbnb CSV or enter figures manually. Published reports appear in the owner's portal.

1. Go to **Revenue** and click **+ Add Report**.
2. Select property, month and year. Upload the **Airbnb earnings CSV** to auto-fill the figures.
3. Verify gross revenue, platform fees and net revenue. Set the **commission %**.
4. Add any expenses (cleaning, repairs, etc.) with amounts and optional receipts.
5. Change status from **Draft** to **Published** to share with the owner.

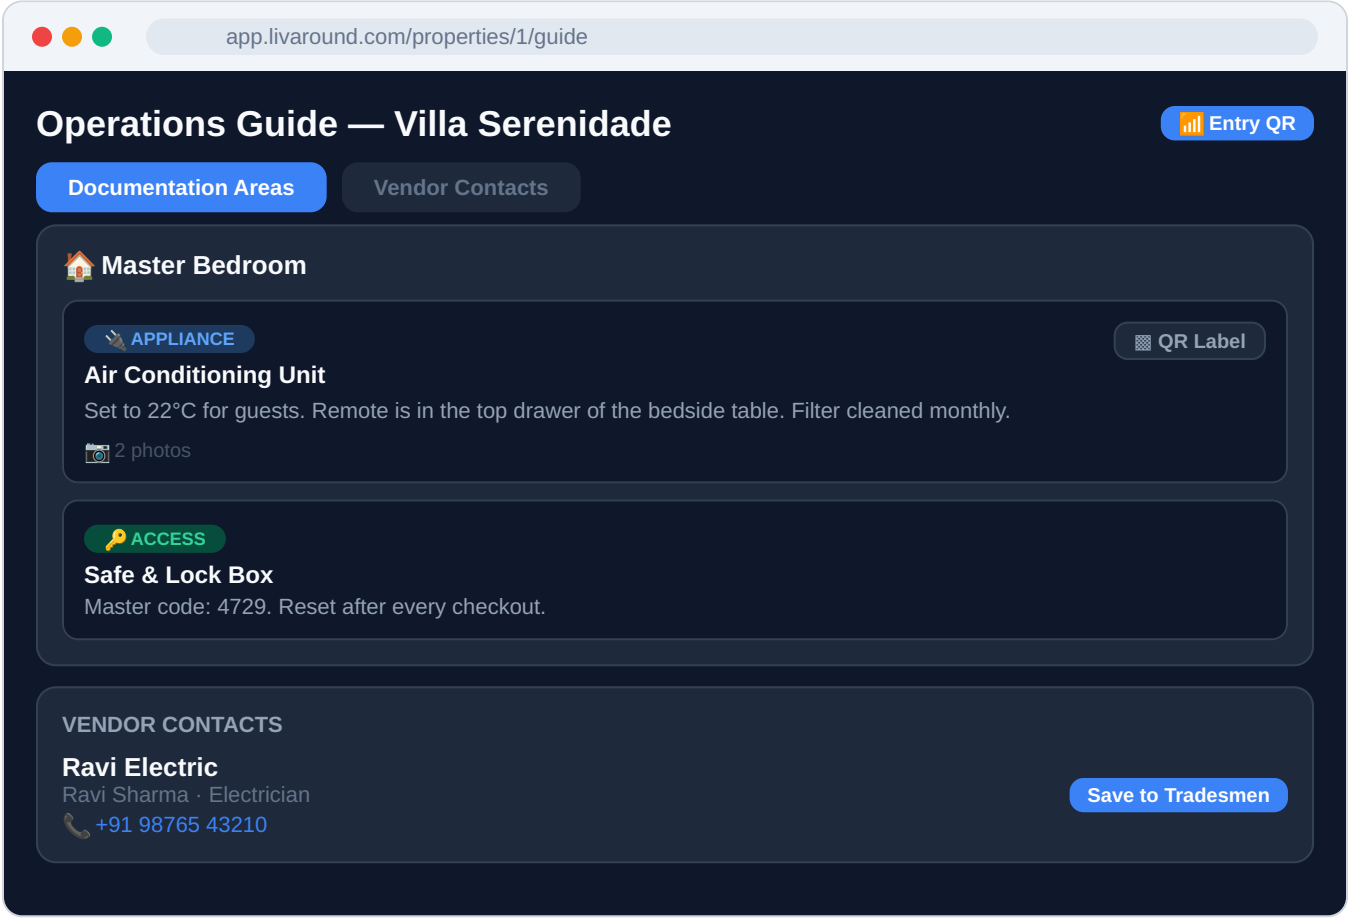


> 💡 **Tip**
>
> Always set reports to **Draft** first so you can verify all figures before the owner sees them. Once Published, the owner is notified and can view the breakdown — and approve or reject any expenses you have logged.

10 📘 Operations Guide & Tradesmen

The Operations Guide is a per-property knowledge base for your on-site staff. Organise documentation by room or area, add instructions with photos, and generate QR code labels to stick near appliances. Workers can access it any time from the app — so they always know where things are and how they work.

1. Go to **Properties** → click **Guide** on the property card.
2. Click **+ Add Area** and name a zone (Master Bedroom, Pool Area, Utility Room...).
3. Inside an area, click **+ Add Doc** — enter title, category, instructions and upload photos.
4. Click **Print QR Label** on any doc to download a QR sticker — attach it near the item.
5. Add **Vendor Contacts** (electrician, plumber, AC tech) in the Contacts tab. Use **Save to Tradesmen** to add them to the central database.

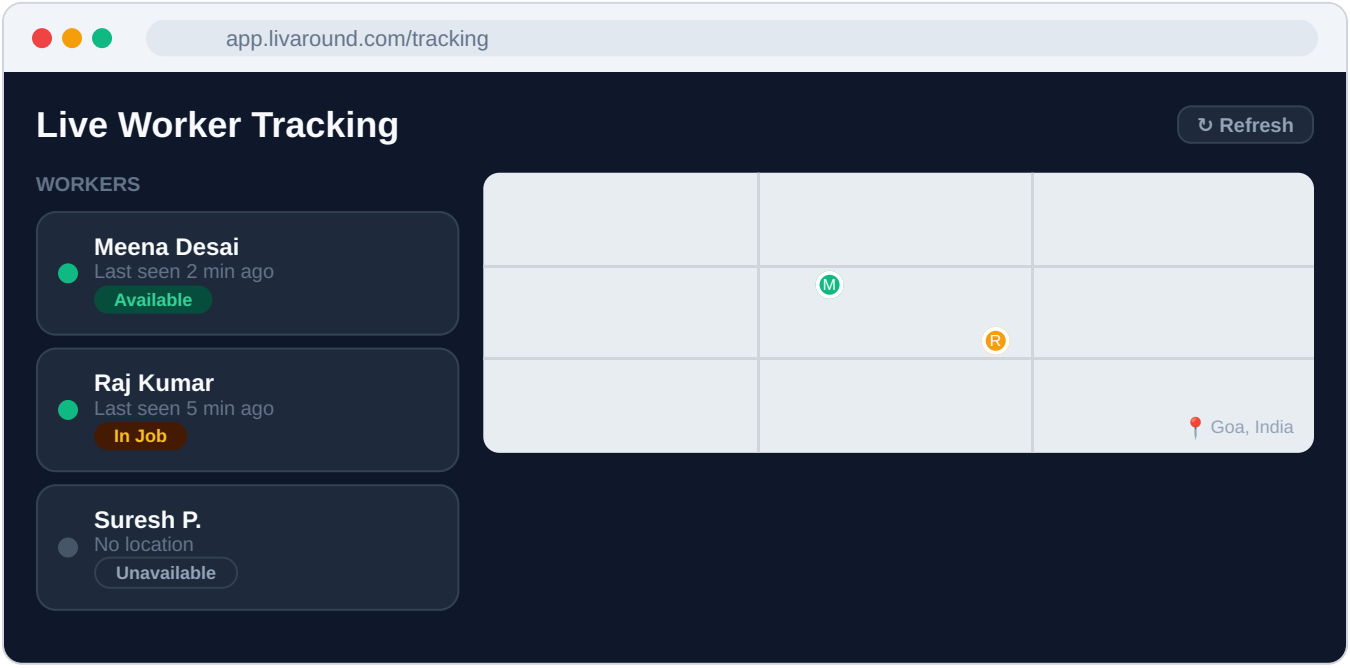


> 💡 **Tip**
>
> Print the
>
> **Entry QR code**
>
> (from the Guide page) and stick it by the front door. Workers scan it on arrival and it instantly shows their active job for that property — no manual searching.

11 📍 Live Worker Tracking

The Tracking screen shows the last known GPS location of all your workers on an interactive map. Locations update every 15 seconds. This lets you confirm a worker has arrived at a property, monitor progress across multiple sites, and respond quickly if someone is delayed.

1. Go to **Tracking** in the sidebar.
2. Workers with a **green dot** have shared their location; grey dot means no data.
3. Click a worker in the left sidebar to centre the map on their position.
4. The map refreshes automatically every **15 seconds**. Use the manual refresh button for an instant update.
5. Workers must grant **Always** location permission in the app for continuous tracking.



> 💡 **Tip**
>
> Workers must allow
> **Always On**
> location access (not just “While Using”) for background tracking to work. On iOS: Settings → LivAround → Location → Always. On Android: Settings → Apps → LivAround → Permissions → Allow all the time.
